12. Essey:

Answer to 2nd question: I had an interview with a local company for a technical engineer role after finishing my bachelor's degree in electrical engineering. Fortunately, I was hired a few days later and began putting my newfound experience to use. In reality, the work of a technical engineer was not difficult for me because I was familiar with technical and practical topics during my studies, and this knowledge and trust led me to consider new roles that could lead to new and difficult issues. As a result, I was searching for new opportunities in reputable organizations with a track record of completing large-scale public and private ventures. Needless to say, seeking projects that were intertwined with administrative duties that would familiarize me with the technical project management world was a priority this time. Unfortunately, the government's management crisis, particularly in the area of security, resulted in a large-scale migration of financial assets and capital from the country, as well as mass unemployment, during those years. The condition improved over time, and I received word of new job openings at a respectable American company named USACE (US Army Corps of Engineers). It should be noted that the USACE Company had built major military bases in important countries using common engineering procedures in both administrative and technological fields, which piqued my interest in taking the job. Fortunately, I did well in the interview; however, since this role was intended for a junior engineer, I had to select the highest-ranking job. To be able to take a significant step forward in my career by taking on new demanding roles in this reputable organization. For almost a year, I served as a junior quality assurance delegate on USACE government projects. Mixed military and civilian management concepts were used to achieve this harmonious relationship. It was here that I first realized how important it was to pursue and find realistic solutions to these problems. However, the most important challenge of the work cycle, which led to the development and exploration of my abilities in the field of current and potential work activities, occurred when our senior zone lead resigned. I was considered a good choice to fill his spot and assume his duties by the office. Since this was my first time in a management role, the job was difficult for me at first. As time went by, I learned more about management and honed my abilities. I enrolled in advanced project management courses to acquire academic knowledge in project management in addition to gaining practical experience. These classes improved my understanding of and management of client-government relationships. I've always tried to raise the technical and management standard of our engineering services to the highest possible level since the beginning of my career. Thankfully, I have begun my second year as a senior quality assurance representative-zone lead. In this position, I have contributed to my team's overall success and improved it. In their findings, I've assisted my team members with the use of technical and competent narratives as well as detailed explanations. In addition, as a zone lead, I have been closely active in client-government interactions and have assisted in the expediting of our ventures.
