

## Statement of Research Interest

There are vital reasons, changing in nature, that have made me come up with a solution to pursue my career outside my country, the Republic of Sudan. First and foremost, there is a poor information technology infrastructure and application, and the gap between the Sudan and other countries is widening in the area of conduct. Although my ambition and morale are high, I have little hope of making significant progress in my career for the next decade. On the other hand, management has proven to be growing rapidly, providing the most promising receivers, both in third world countries and around the world. It makes sense that I am invited to consider a shift to this rich business. I have thought about this issue carefully and Have a clear vision and a full understanding of the imperatives, consequences and even risks in order to achieve this career. I believe that I have reached a high level of preparation, and I have sufficient motivation and determination to overcome all the expected and unexpected obstacles in order to make this work a success. My belief is that any difficulties can be considered challenges aimed at testing and distinguishing between a creative engineer and a responder, between a successful professional and an amateur.

From an alternative perspective, the technical link between mechanical engineering and engineering and management has always been, if not only, necessary. Since graduating in 2017, I have worked in many companies, fulfilling different roles, mainly as a maintenance engineer. The reform, the need for a new system of international law is not a viable one. Currently, my ambition is to achieve a new level of experience, develop and improve skills along the way, and to serve as the beginning of achieving my personal plans and goals. And what better way to serve this purpose of a reputable master's program in such a wonderful institution as .

IIT Kharagpur My previous university studies have already included manufacturing, thermodynamics, north

quality management, production management, manufacturing processes, production planning, design and manufacturing systems, and I guarantee you, were among the favorite and well-understood topics. These units have even directed me to choose my graduation thesis; it's engineering management.

I would like to apply for a master's degree in modern Industrial engineering management in India to quench the thirst for management and manufacturing needs in our country with your latest knowledge and technology. And you know that industrialization is the first in development and progress

Gain a deeper theoretical and practical knowledge in this area. During my studies, with great hidden abilities in I will try to come up with the best of everything. To accompany professors and university colleagues in research. After completing master's studies, I hope to be able to participate in maximizing my research technology in these areas to benefit my economy and enhance the living standards of my compatriots. I think this program will give me an opportunity to get the ability to master in this area. I hope that I can gain more experience in dealing with situations, peoples, systems, and demands that will be of great help in my career choosing a graduation project thesis;

Managing the engineering of modern Industrial .

From a personal point of view, I think i should be a committed, peaceful, calm and patient individual. I am very determined with regard to studies and always aspire, not only to meet the required rates, but to exceed them. When it comes to academic success, then my highly competitive spirit is emphasized. It is a personal trait to show the best respect and respect for professors and colleagues. Additionally, I have the ability to adapt quickly to my environment or my culture. Finally, my colleagues pointed out that I am a good team player who has the ability to work under pressure. My hobbies include playing football, besides finding great joy in reading stories, novels and biographies. Last but not last, I look forward to completing my postgraduate studies from this university.

Best regards.

Dahi Faisal Al-Sheikh
