Question number 4. Challenges facing small-scale Miners in Tanzania. Tanzania is among the countries having abundant mineral resources as other African countries. Minerals present in Tanzania have been grouped into several groups, for example, Metallic, Industrials, gemstones, and energy Minerals. the following are the challenges facing small scale miners in Tanzania

1. Poor technologies used by these small-scale miners pose a danger to miners themselves this includes the use of poor machines that have to be operated manually during operations. this problem can result in fatalities
2. lack of knowledge and skills lack of skills on the mining sector has been a serious and big problem to small-scale miners in Tanzania, most of them lack the technical know-how to improve production as they mine locally.
3. Inadequate Market information most of the small-scale miners lack information as to where they can sell their products, so they end up selling and getting low profit, they don't know where the markets are.
4. lack of capital this has become a big and serious problem to miners in Tanzania, most of them have no capital for making a huge investment and hiring expertise for helping them running their businesses
5. lack of modern machinery and other equipment In Tanzania, small scale miners do use local machinery which ends up damaging themselves and causing fatalities and serious injury and getting a small recovery

**Solutions.**

1. Providing them with education by introducing a new and special programme dealing with small scale miners. now they have been forced by the government to attend several and different short courses.
2. Proving them with loans and grants from the government and other financial institutions, this is done through education that they are getting to be in groups so that they can be easily reached by financial institutions for loans and grants.
3. Providing them with modern tools and machinery for increasing production, Modern machines will actually help them increasing production.
4. Providing them with training about environment and safety issues, this includes best methods for recovering Gold and gemstones, recently miners are using Mercury and cyanide to recover Gold which is not environmentally friendly, safety issues also have to be talked in mine areas to avoid unnecessary fatalities and any other kind of damage that may occur during operations
