

Statement of research Interest

I studied civil engineering at Paktia University and it was dream for me to achieve this degree. When I completed my education, the dream was to work in my field especially in transportation sector and I did it. For one year I worked in a transportation project in Afghanistan and I worked as a quality control engineer. my future plane is to do my master degree in transportation field and will do my final research of master degree in transportation problems in Afghanistan.

I worked in company that had a project in transportation and it was a road that built Kabul, Afghanistan. So I was a Quality control engineer and worked in that company. When I was in that job, I learned a lot through my job in transportation field and also I faced with those problems that nowadays Afghanistan transportation system face with that. so that's why I decided to do my master degree in transportation to solve the at least some problems of transportation in current situation through my field.

There is lots of problem in Afghanistan transportation systems, especially congestion, low material and also unskilled staff of engineering. so I chose university of IIT Kharagpur cause of best education in transportation field and also have best experience in transportation field by decades.

So Afghanistan is a mountainous and country that pass lots of civil wars. Through these problems the transportation system is weak and in danger. I hope that through my master degree in transportation field at least make some changes in my society. We all Afghans are very thankful for the hospitality and warm welcome of Indian people in history of Afghanistan.
