

# **Statement of Purpose**

**For Master's Program Admission under**

**ICCR Scholarship For Afghanistan**

**Irfan Ullah**

Master Program in Energy Systems Engineering

"The whole purpose of education is to turn mirrors into windows."

Sydney J. Harris –

What I understand from this quote, not the actual meaning is that when you look into a mirror it only shows your own perception of view for things, however if you make the mirror into a window; you can see the whole world with different kind of viewpoints. This quote drives me towards acquiring the necessary educational and technical qualifications at Global Educational level .

## **PURPOSE**

The novel genres of engineering and technology have manifested the lives of billions across the globe. These glorious contributions attribute the beautiful minds behind it. Inspired by these marvels, I have put myself to the rigorous exposures to make myself eligible for such mighty challenges. My engineering motto served me an imperative roadmap to overhaul the Energy systems and its application that I craved for. My innate technical capabilities spoke volumes of my talent and novelty. I want to contribute the world and especially my country with in my field, professionally and academically, for this I have to know my subject inside out. Undergraduate study gave me the opportunity to understand existing knowledge in my field, and graduate school will give me opportunity to contribute to that knowledge. To me further study as an investment in my potential. I will gain more professional skills, my personal development and the valuable connection with fellow graduates, academies and industry expert are the other reasons of my further studies. As graduate school, will be surround by the leading thinkers of my field so working with people from whom I inspired will keep me motivated and hard work will be much easier for me.

## **Why India & IIT Kharagpur**

Well, if I am asked to give the reason in one sentence, I would simply say that India is going to be technology, political and knowledge hub for the regional countries. India is the perfect place to study abroad and I believe that "Master Program in Power and Energy Systems Engineering at

Indian institute IIT Kharagpur is the best suited program to pursue my higher studies so that I will be able to tackle real life engineering challenges. The willingness of my family and also the inability of my current financial situations which restrict me from continuing my education further bring me to this conclusion that for continuing my studies further and achieving my above mentioned goal I think “ICCR for Afghanistan Scholarship” is the best opportunity for me.

### **Study plan**

Afghanistan is a developing country need too much for higher qualified experts to use their youth energy for developing the energy field relative infrastructure and share their experience for better future for region and world.

Studying at one of multicultural institute of India will surely improve my interpersonal talents. I would be learning in one of the best institute in region. Besides, I will have the opportunity to develop myself in an international environment giving me the privilege to meet new people with different points of view. I select this course because it perfectly matches with my career aims. The courses related to Electrical Engineering in your respected institute are offered. That is why, it attracted me. The master program is offered in English and it drew my attention because the **medium of instruction and teaching at my undergraduate studies was also English**. I am convinced that this master program would provide me the necessary theoretical knowledge and practical skills for my career growth.

Now I am in field job but I observed that I became just a machine and get limited to few expertise, that's why I set my mind to do Masters Power and Energy Systems Engineering and hopeful for the PHD in the future , so that to be able for research and sharing new principles, technology and knowledge in this field . And after all definitely I will grasp my dream of being a researcher and Professor of Electrical Power & Energy World.

I realize the highly competitive demands of the program, but I have the ability, ambition and motivation to exceed the requirements and to surpass when taking this scholarship. I am positive and hopeful for Power and Energy Systems Engineering in IIT kharagpur.

Yours Sincerely: **IRFAN ULLAH**
