<b>12. Essey:</b>	<p>Since I was a young child and in the first grades of school, I had a strong interest in science subjects, and as a result of this enthusiasm, I learned science subjects in private courses in addition to school courses, which greatly aided me in attending university. I completed high school with honors and outstanding grades. After graduation, I passed the university admission exam, which is administered throughout Afghanistan, and I was accepted into the Department of Electrical and Electronics Engineering at Kabul University's Faculty of Engineering. I could complete my university education in 2018. In addition to university courses, I engaged in social activities such as teaching science subjects in underserved areas of Afghanistan, spending three months in Samangan province and three months in Maidan Wardak province. The goal of this project was to remove barriers for the underprivileged who were unable to learn adequately owing to poverty and a lack of resources. Thus, they could not compete with students in Kabul or the provinces that have better facilities and in the entrance exam, which is a competitive exam. Among other things, the situation was much more difficult for the female class, who could not travel to Kabul or other provinces to study, both because of financial problems and conservative families. Therefore, by teaching the deprived students, I tried to create equal conditions for them so that they could compete to enter universities. I also worked as an intern at ACG for six months during my senior year, three months in the power engineering department and three months in the AVIATION department. In these disciplines, I was able to obtain valuable experience. After graduation, I spent six months as an intern in the YES-II program to increase the capacity of newly graduated renewable energy engineers, which included two months of online training in renewable energy, entrepreneurship and leadership, and four months of practical work in public and private companies in these sectors. I've also worked in the cultural field, including participating in a cultural exchange camp in Uzbekistan (Tashkent, Samarkand, and Bukhara), which was one of the most memorable experiences of my life. In addition, I took part in the camp's leadership and entrepreneurship workshops. Through this scholarship, I can raise my academic level in the field of electrical and electronics engineering and do more research in this field, and I am still very interested in getting to know the culture of the Indian people well in addition to studying.</p>
