Discuss an accomplishment, event or realization that spark a period personal growth and new understanding of yourself. The first and most important accomplishment that has made a big difference in my life goes back to school and an adolescence, on that time my family mostly (parents) always supported me, I myself tried a lot to study hard and get a good prospect for my future, and I understood what is the need of my country, so I found that as an engineer I can serve to my people and my country in the best way. And finally, I made it. succeed in to my favorite field, department of electrical engineering Kabul university. got the highest score 333 out of 360 in KANKOR EXAM, and secured 15th position in Ghazni, province. In war-torn countries like Afghanistan, it is very difficult to study and pursue your dreams but thanks to my parents and my family I did it, Means I was one of the excellent students who introduced for the ICCR scholarship in Maulana Azad National Institute of technology (MANIT) in BHOPAL city of India. Secondly, the big accomplishment which happens in my life goes back to the university career. For the first time when I arrived in India (Bhopal) everything was new.it was my first time that I visited India, I did not know Hindi language and anything about Indian culture. At the beginning it was very difficult for me to deal with all difficulties because it is very difficult for an afghan student to compete with his/her Indian batchmate So, step by step I could overcome all the challenges after one year staying there. In addition, four years doing my bachelor degree I could better understood Indian language and Indian culture. Four years of my bachelor career was the best period of my personal growth, during this period I learned how to deal with difficulties, and how to pursue your dreams under pressure in a new environment. Thirdly one of the super accomplishment is getting six months job (internship) in GIZ Afghanistan Yes-II (youth entrepreneurship support) program which is supported by GERMAN cooperation. The main purpose of the program is to support fresh graduates' engineers, to start their own business and also propound trained engineers to the energy sector of Afghanistan. meeting excellent people with excellent ideas there made me an experienced person. And for sure I can say that I can contribute to the needed Afghanistan energy sector. As the main purpose of the program is to train the entrepreneurs of tomorrow, it helped me to understand the concept of business plan and how to start a new business when you are new in the market, so with the help of our mentors we have developed a business plan and we are planning to lunch our own business in the near future. Finally For the better understanding of myself and need of my beloved country I reached to this conclusion, that I have to study my master degree in the field of power system because Afghanistan has the lowest power consumption in the world, to reduce Afghanistan dependability on imported electricity from its neighboring countries the energy sector of Afghanistan needs experts and engineers, As per my experience during bachelor I found India best destination and we can use from their experience and knowledge to solve Afghanistan dependability on neighboring countries electric power , and in the near future Afghanistan can be on of exporter of electric power.
