Letter of Appreciation

It is a great pleasure for me to write about Nishat Bagum , Assistant Professor of Physics who worked under me as a Curator at National Museum of Science & Technology (NMST), Dhaka, Bangladesh from 27th September 2018 to 2nd January 2020. She obtained her Master of Philosophy (M. Phil.) in Physics from Bangladesh University of Engineering and Technology (BUET) in the year 2008. She also received the prestigious Australian Award Scholarship (AAS) in 2015 and finished her Master of Education (M. Ed.) from Monash University, Australia in 2017.

During her working tenure in NMST, Nishat worked hard to ensure better service for the citizens. I believe she has the capacity to implement national development program with skill and endeavour. As a curator, she played key role in the management of science gallery and related administrative duties as well. Implementing Annual Performance Agreement (APA) efficiently in the organization was also her prime duty, where her performance was praise worthy. Apart from those functions, she was also successful in arranging science and technology based seminar and programs to inspire the young scientists for technological innovation.

She is amiable, liberal, dynamic and self-confident and rational in dealing with her colleagues. She has also leadership quality and teamwork capability to get things done most efficiently. I wish her every success in life.

(Muhammad Munir Chowdhury)

Director General
