Describe a topic, idea, or concept you find so engaging it makes lose all track of time. Why does it captivate you? What or who do you turn to when you want to learn something? When I was preparing for the civil engineering entrance examination in Kathmandu in 2015, a massive earthquake struck the entire South Asian Region. It killed thousands of people in Nepal and destroyed ancient structures and modern buildings and many other mountains in a flash. I was awestruck by the damage as a human being and shocked by the fragility of human constructions. My resolve to study and understand this particular aspect of engineering, civil engineering gained momentum. My interest in this field has always been intense but the natural disaster took me to the task. I am around and helped but equally felt helpers as an aspiring scholar of civil engineering. I completed my graduation from a renowned university in India and return to Nepal and after some considerable time in the field, I explored further prospects of study. When I visited the real field, I love very much to do the management of time, equipment, and manpower in the duration of that project and must finish before the prior time so from that I like so much to do master, in construction management to explore every corner of the management skills in construction projects. During my college years, I was also part of the Directorate of Students Affairs (DSA) to maintain discipline in the college events. And also I was an executive member of an NGO (Blooming Beacon) which is broader in and out campus responsibility. I have been appreciated for my humanitarian leadership quality which maybe some help to the college environment. Apart from my extra-curricular work, I also completed two internships one in building construction in the oceanic area and another one is in Nepal in the hilly area. I was appointed as a site Engineer after my study and explore things by setting my goals by emphasizing my creative vision and management skills to complete the project. Through this master's program in construction management, I hope to enhance both my academic and practical skills, So that I will be able to explore an advanced area of study in engineering and its related areas of study in engineering and its related subfields. The opportunity to study within a professional academic atmospheric to develop real-world skills will be invaluable experiences for me. I aim to bring in the knowledge information and contents of the discipline in Nepal which still is in dire need of university professions from international institutions with a state of art academic knowledge. This scholarship will certainly full fill my objectives.
