**12. Essey:**

Leadership, in my opinion, is not just limited to showing the right path; it's also about inspiring and influencing teammates and performing the task together. From the very initial days, I learned adaptability, self-confidence, and zeal to take risks as the key to success. During my school days, I was an active member of "Bal Yojna Samuha" a child club. We conducted several educational and sports activities. I believe effective leaders are those who possess self-confidence, strong communication and management skills, openness to change, and willingness to take risks. My leadership skills first appeared when I went in for sports. I started training with the Danfe Boys cricket club at the age of twelve and later lead the team for several years. Under my captaincy team won several local, district as well as zonal tournaments. I am still a part of this club. My responsibilities have increased now, I train and motivate the younger players to achieve their goals. During my graduation, I participated in several conferences and seminars. I led a project on hovercraft. We built a working hovercraft with locally available resources. Along with this, I also gave a presentation on the whole process from designing, making and working of the hovercraft. As a leader, I am very passionate and particular about the organizational activity. A leader should also possess strong communication and management skills. I was appointed as a site engineer in Siddhi Laxmi Steel Pvt. Ltd, Nepal soon after completion of my bachelor's. The factory was under construction at that time. Half of the civil work was done and machine erection work was about to start. I was a fresher in the industrial sector and was the only mechanical engineer on that site. My team leader gave me the responsibility of monitoring the operations. My task was to perform all the mathematical calculations and erect machines. I guided all my teammates on how the machine should be erected exactly on that mathematical values from the reference point. In my personal experience, I have been able to build a cordial relationship with my co-workers maintaining transparency and consistency throughout. After the completion of the project, I was given the responsibility of maintenance. Along with my teammates, we were performing routine maintenance on equipment and determining when and what kind of action is needed for the clearance of the havoc. Leading the team in preparing a checklist for machine maintenance, generating computer numerical control (CNC) programs for grooving, notching, and branding, and operating the CNC machine made me more confined and determined. As a young leader, I have good accomplishments and an ample amount of energy to take forward my community. ICCR scholarship will escalate my leadership capability even more and will award me to interact with other future leaders.
