Dear admission committee,

I am pleased to recommend Ashutosh kumar for his PhD program of interest at your institution. I am a Professor in the Geology and Geophysics department at Indian Institute of Technology Kharagpur, one of the leading engineering institutes in India. As an educator and mentor to Ashutosh kumar, I have known him for the past 2 years.

I taught Seismology, Gravity and Magnetic prospecting methods during his first year in MSc, and he excelled in his performance securing good grades. Ashutosh has shown the sincerest form of dedication towards his class, assignments. He meets frequently to discuss his progress with the questions, and comes up with well-researched approaches for solving them often going beyond the lengths I would expect of him. He is a sharp, self-motivated individual with commendable scientific attitude and eagerness to learn. His work is well organized and highly presentable.

At a personal level, I would describe Ashutosh as curious by nature, who does not hesitate in reaching out or discussing questions with new people.

Overall, Ashutosh unquestionably has my strongest recommendation. I am positive that he can adapt to the challenging environment you have to offer him and contribute significantly to your research. Not to mention, he will also share his energy, enthusiasm, positivity, and talent with his peers and collaborators.

Please do not hesitate to contact me ([email]), [phone no.] should you require any additional information.

Wishing him a bright future.
