

**To whom so ever it may concern**

Mr. Siva Teja Sowrya Yannana is a Master's degree student at "Civil and Environmental Engineering" of "Politecnico di Milano", Milan, Italy. He started research laboratory activities in March 2021.

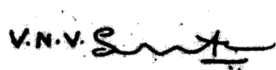

He has always had a productive attitude and has always been willing to challenge his knowledge and acquire new skills. He has also demonstrated good intuition towards the definition of his experimental activity.

Siva has always demonstrated a strong will, dedication and independence while being at the same time able to help colleagues in lab. I have observed his behaviour and attitude this allows me to say that he will put all of his effort to quickly adapt to any international atmosphere and reach brilliant levels of scientific production.

He acquired knowledge on working with different analytical instruments and measuring different aquatic chemicals. I can strongly recommend him as a valuable researcher, suitable to cover a PhD position in your institute. For further information please don't hesitate to contact me.

Best Regards

Srikanth Vuppala PhD

Senior Researcher

DICA, Environmental section,

Politecnico di Milano, Piazza Leonardo da Vinci, 32, 20133 Milano (MI)
