

I am writing this letter in favor of Mr Imran Khan who is applying at Doctoral Program. He was a student of Masters Course in the Department of Physics since 2018.

Imran has evinced enthusiasm to acquire comprehensive knowledge of the subjects. He often came up with insightful questions in the discussions and puts across his views and suggestions lucidly.

He has qualified master's degree from Jamia Millia Islamia and pursued different projects having a diverse nature. He did projects on Tuning Structural, Morphological and Optical properties of Tricomposite layer by layer deposition of Multi-Wall Carbon Nanotubes. It reflects his competence in dealing with the various modes of studies as well as his transient nature of being able to switch between any academic hierarchical frame-work.

Given an opportunity he will prove to be an extra ordinary researcher. I strongly recommend him for the graduate program.

A handwritten signature in blue ink, likely belonging to Azher M. Siddiqui, written over a light blue grid background.
